

HARRY NICHOLAS

Product Designer (UX/UI)

 [My Portfolio](#) |  harry.nicholas1996@gmail.com |  (+44) 07948206560 |  [LinkedIn](#)

ABOUT ME

Product Designer specialising in complex journeys, experience optimisation, and product-led delivery.

I work at the intersection of design and product—shaping direction, improving performance, and delivering scalable solutions across customer-facing and platform experiences.

EDUCATION

Honours degree – BSC Digital Media
2015-2020

2:1 (Sandwich year) - University West of England

WHY I'M A STRONG FIT FOR JACK & JILL

- ✓ Experience operating as a product-focused designer, working across problem definition, ideation, prototyping, and delivery to shape end-to-end user experiences
- ✓ Strong ability to simplify complex, ambiguous problem spaces into clear, intuitive workflows—particularly across data-heavy and multi-step user journeys
- ✓ Confident working in fast-paced environments, making pragmatic decisions and trade-offs to deliver value quickly while maintaining a clear product vision
- ✓ Experience collaborating closely with founders, product, and engineering to define direction, align priorities, and ship high-impact features
- ✓ Skilled in prototyping and iterating rapidly in Figma to explore ideas, test concepts, and refine user interactions
- ✓ Strong product thinking, balancing user needs, business goals, and technical constraints to drive meaningful outcomes
- ✓ Experience leveraging AI-assisted tools to accelerate ideation, prototyping, and workflow design
- ✓ Systems thinking approach to design, ensuring consistency, scalability, and cohesion across complex products
- ✓ High ownership mindset, taking responsibility for shaping solutions and driving them from concept through to delivery

EXPERIENCE

User Experience Designer/ Product Owner – Blue Crow Sports (via Alchemax Ltd)
Oct 2025–present (Fixed-Term Contract)

- Sole designer on an internal analytics platform, driving UX improvements across a complex, engineering-led product
- Operate across design and product ownership—prioritising roadmap features, facilitating agile ceremonies, and aligning stakeholders and engineering
- Translate stakeholder needs into clear product direction, improving usability, structure, and overall experience quality
- Lead research and discovery through stakeholder interviews and competitor analysis to inform design decisions
- Introduced a foundational design system and modern UI patterns to improve consistency and scalability
- Deliver pragmatic MVP solutions under tight timelines while shaping longer-term product vision
- Leverage AI-assisted tools to accelerate ideation, prototyping, and developer handoff

Product Designer (UX/UI) – BT Group
2022–2025 - 3 yrs, 4mo

- Led end-to-end optimisation of EE Business Shop, simplifying the buying journey and improving conversion performance
- Identified friction points through research, analytics, and testing—delivering measurable improvements in engagement and usability
- Shaped the design of BT Wholesale's customer portal, improving navigation, accessibility, and account visibility
- Designed and delivered EE's first bulk quotation tool, transforming manual workflows into a scalable digital solution
- Worked across complex B2B journeys and high-traffic platforms, balancing user needs with business and technical constraints
- Collaborated closely with cross-functional teams to align stakeholders, define requirements, and deliver effective solutions

Junior Designer - M3 EU
2020–2022 - 2 yrs

- Hybrid role of front-end development and web user interface design. Crafting responsive web pages, banners and emails for pharmaceutical clients.

Freelance Email Developer
2019-2020 - 1 yrs 2 mos (Part time)

Digital Developer Intern – Flourish
2018-2019 - 1 yrs 2 mos

KEY PROJECTS

EE Business Shop – Research-Led UX Optimisation [↗](#)

Redesigned the B2B e-commerce journey for EE during migration to a custom CMS, with a focus on improving mobile conversion.

Led with quantitative and behavioural research: analytics revealed **68.5% mobile traffic** but significantly lower mobile conversion. Funnel analysis and session insights identified friction in plan comparison, hidden filtering, and high cognitive load on mobile.

Ran stakeholder design sprints to align on measurable hypotheses, then prototyped and A/B tested interaction patterns. Replacing dropdown filters with visible “chip” filters delivered a **159% uplift in engagement**, contributing to conversion growth from **5.2% to 6.75%** post-launch.

Impact: Research-driven UX decisions directly improved mobile usability and measurable business performance.

‘The Hub’ Launch by BT Wholesale - Qualitative Research & UX/UI Redesign [↗](#)

Collaborated within a multidisciplinary team to redesign The Hub, an account management platform for EE business customers, addressing usability and trust issues in the legacy “Business Zone.”

Research: Co-facilitated and moderated in-depth user interviews (limited but high-value sample), guiding participants through live demonstrations of the existing platform and proposed designs. Analysed rich qualitative data to surface users’ mental models, emotional responses, and the impact of recurring bugs and performance issues on confidence and task completion.

Triangulated findings with competitor analysis and analytics on high-traffic pages and funnel drop-offs to pinpoint frustrations and friction points.

Outcome: Users responded positively to proposed designs during moderated sessions, validating structural UX improvements. Research insights informed prioritisation across UX and engineering, ensuring usability enhancements addressed both interaction design and system performance concerns.

Blue Crow Football Scouting Platform (Confidential)

Lead UX Designer & Product Owner

Discovery: Led user interviews with football scouts and conducted competitor analysis to understand evaluation workflows, pain points, and opportunities. Partnered with senior stakeholders (CEO, Sporting Director) to align on product vision and priorities.

Definition: Defined a **mobile-first MVP strategy** under tight time and engineering constraints, establishing a clear North Star while prioritising core scouting workflows. Translated ambiguous requirements into a focused, actionable product scope.

Solution: Delivered a simplified player evaluation experience optimised for speed and usability in live and post-match contexts. Introduced a flexible grading system to accommodate varying mental models, validated through user testing and iterative feedback. Drove delivery by managing scope and maintaining engineering focus.

Outcome: Successfully launched v1, enabling a more structured and consistent scouting workflow. Reduced reliance on fragmented tools and established a foundation for future enhancements, including improved data visibility and video-integrated reporting.

EE Team Plan Calculator – Proof Of Concept [↗](#)

Supported a business-driven proof of concept for a new “Team Plan Calculator” feature on the EE platform by facilitating live prototype research with users.

Worked within the design team to **test and validate a Figma prototype**, independent of the initial business decision to pursue the feature. Conducted moderated sessions where users interacted with the live prototype and provided feedback on functionality, clarity, and their mental models.

Collected and synthesised qualitative insights on usability and concept fit — users were largely positive about the approach and confirmed it aligned with their expectations and needs.

Outcome: Research evidence strengthened business confidence in the feature concept and contributed to the decision to proceed with development.
